

Ensure the sterility and quality of your environmental monitoring program

Sterility testing is a crucial step in quality control that must be taken to ensure the safety of products in the cosmetic, pharmaceutical, medical device, and diagnostic equipment industries.

Validate and Verify with a comprehensive portfolio of products. Thermo Scientific™ Remel™ and Oxoid™ media are what you need for sterility testing as indicated in the Pharmacopeia (USP <71>, <797>, <1116>).

Additional custom options are available upon request for your specific testing needs.

In the United States Pharmacopoeia, methods for Sterility testing (<71>), Microbial Evaluation of Clean Rooms (<1116>), and Pharmaceutical Compounding-Sterile Preparations (<797>) all outline the need for validated sterility procedures that include environmental monitoring. While there are some commonalities among the products used for these various testing methods, it is critical to validate each chosen methodology to avoid costly false positives and loss of critical product.

Sampling and growth

- Fluid Thioglycollate Medium
- Tryptic Soy Broth (TSB)
- Animal-free alternatives
- Cold Filterable options

Environmental monitoring

- Contact Plates
- Thermo Scientific™ Isolator Wrap™ Sterile Contact Plates
- Settling Plates
- Environmental Swabs
- Triple Wrapped Irradiated Plates

Positive control organisms

- Staphylococcus aureus* ATCC® 6538™*
- Bacillus subtilis* ATCC® 6633™*
- Pseudomonas aeruginosa* ATCC® 9027™*
- Clostridium sporogenes* ATCC® 19404™*
- Candida albicans* ATCC® 10231™*
- Aspergillus brasiliensis* ATCC® 16404™*

Diluting/rinsing fluids

- Fluid A
- Fluid D
- Fluid K

Mycoplasma transport & isolation

- A-8 Agar
- A-8 Agar, Selective
- SP4 Glucose Agar/Broth
- PPLO Agar/Broth
- Mycoplasma Agar/Broth
- Mycoplasma Broth Base, Frey
- Collection and Transport System
